200 Watts Siren, Air Horn, PA with 4 relays

Do you need a siren that can activate lights and all siren tones by simply depressing the horn ring switch?

XA700 is designed for this purpose and economic. It has the **Totally Hands Free** mode to let the user focus on the road. When wired to vehicle horn circuit, XA700 can play siren sound with single or double depressing on the horn ring switch on the steering wheel to generate peak & hold, coast down, or air horn and turn the lightbar on.

You can also make the horn ring switch to sound air horn or the button on the handheld controller to do so. When depressing the "Light" button on the compact handheld controller, XA700 can circulate three different groups of relay configurations. Quickly depressing twice, all relays

will be turned off.

A multicolored LED is on the handheld controller with different LED color to indicate the configured relay outputs. Relays can be configured with DIP switches and jumpers at the users end. The user can choose two or three different lighting applications with XA700. For example, pursuit and stop applica-

tions. Pursuit application can use one group of relays to turn on and while the vehicle stops, another groups of relays can take over, such as take-down and rear stop lights. Compact handheld control controls all function of XA700.

Focus on your road, not the siren switch panel

Police Sheriff Christopher who used XA700 assets "I use two aux outputs. One is for driving and the other is stopping. XA700 turns on the lights and siren automatically when I push my horn switch and

when I stop, I just depress the Light button for take-down lights. I don't have to search the siren panel at all so it keeps me safe while on duty." Indeed, each button is operable by single or double depress to free your

eyes and let you focus on the road condition.
